Project deliverable 2

Start Assignment

- Due Sunday by 11:59pm
- Points 10
- Submitting a file upload
- Available Oct 28 at 12am - Nov 12 at 11:59pm

Project part 2 (login page) : Due Date: November 9

For this deliverable you should develop a web application for:
1. logging in an already created account. The data required for the login (username/password) can be directly inserted into the database.
2. logging out
3. The idea is that you are able to read the user name and password from a login page (in HTML) and check the database to verify it.
   It should your answer with a message indicating whether the user has been logged in or not.

The idea is that these are very simple jsp pages - we just want to make sure that each team has installed MySQL and everyone has understood how to use jsp, JDBC, MySQL etc to do something simple (see Canvas>Modules->Project Installation and Canvas->Files->Project Files for useful instructions).

What to submit (One submission per group please - Only ONE member from each team should submit):

<1> Please submit, in the form of a **ZIP file**, the web application you have created that lets a user log in and logout from the system. In order to do that, just go to your eclipse workspace and compress the folder of your project. Please ***don't submit your .war but a .zip file.***

🔊 An **.sql file with your database schema** as exported from MySQLWorkbench. (Click: Server->Data Export. Then select your schema and click the radio button option "Export to self-contained file" and the "Include Create Schema" checkbox)

<3> Please submit the credentials (login and password) of at least one user.

Good luck!
